Education

bachelor's degree, *Faculty of computer science and artificial intelligence (FCAI)* 09/2020 – 07/2024
GPA: 3.32 sadat city, Egypt

Certificates

Web development. Information Technology Institute (ITI)	Introduction to database system from Meta  Coursera	Version Control System from Meta  Coursera
AWS Academy Cloud Foundations  AWS academy graduate	Associate Data Engineer  Data camp	BI development Information Technology Institute (ITI)

Skills

HTML, CSS, JavaScript, React, Node.js, Express, C++, Java, Linux OS, MySQL, SQL Server, PostgreSQL, Git & GitHub, Data Warehousing, Data cleaning, Data visualization, Docker, ICDL

Professional Experience

Full stack developer , <i>Gommla market</i> Full Stack Developer, responsible for independently managing the entire software development lifecycle (SDLC) of web applications. Experienced in designing, developing, and deploying solutions using React, Node.js, Express, and SQL Server. Skilled in building seamless user interfaces and robust backend systems, optimizing performance, ensuring scalability, and following best practices for code quality and maintainability.	11/2024 – present
BI developer , <i>Information Technology Institute (ITI)</i> During a one-month full-time practical training as a BI Developer (7 hours per day), I gained hands-on experience in working with databases and data warehouses, focusing on data collection, cleaning, and transformation. Throughout this period, I developed strong skills in SQL querying and data analysis, learned how to handle ETL processes, and became proficient in preparing accurate datasets for analysis. Additionally, I created interactive dashboards and reports using BI tools to visualize data insights and support business decision-making.	08/2023 – 09/2023

Projects

ATM system

Developed an ATM system using Java that allows users to securely log in with a username and password to perform banking operations, including balance inquiries, cash withdrawals, and deposits. Implemented input validation and error handling to ensure smooth user interaction.

Online learning platform database (OLP)

Participated in designing and building a relational database for an online learning platform using SQL and SQL Server. Wrote optimized SQL queries for fast data retrieval and improved performance, ensuring smooth access and management of data for users and administrators.

College learning platform (CLP)

Designed and developed the front end of a college learning platform as a graduation project using React, JavaScript, and CSS. Participated in planning, analysis, and implementation to ensure a responsive and user-friendly interface. The platform supports four user roles:

- **Guest:** Can view the Home page.
- **Student:** Can access enrolled courses, view content, take online exams, and upload assignments.
- **Instructor:** Can upload course materials, create exams and assignments, and grade student submissions.
- **Admin:** Manages user accounts, course assignments, department links, instructor-course relations, and student enrollments.

WooCommerce Products Syncing

Developed and implemented a solution for syncing product data between WooCommerce and SQL Server databases. Automated synchronization of product information, price updates, and promotional offers (percentage or fixed value). Designed a user-friendly interface for setting offers, including start and end dates. Optimized the process for accuracy and efficiency, improving product data and promotion management.

Project Management Applications

Developed a project management platform to facilitate communication between managers across various departments. The system enables managers to request, assign, approve, or reject tasks and applications. Approved tasks can be assigned to employees within specific departments. The platform also supports scheduling meetings, both in-person and online, with integrated virtual meeting links. This solution streamlined internal collaboration, improved task tracking, and enhanced organizational efficiency.
